

# CTRL Systems

## Product Catalog

# Ultrasound

### Turn-Key Solutions

Condition Based Monitoring Program

Compressed Air Energy Savings Program

### Applications

Diagnose Motor Bearings & Gearboxes

Detect Gas & Vacuum Leaks

Assess Steam Traps & Valves

Detect Electrical Arcing & Corona

Detect Leaks In Non-Pressurized Systems

Improve maintenance practices, save energy,  
reduce production interruptions, and more

# PROGRAMS & SERVICES

## CTRL CBM (Condition Based Monitoring)

Total Solution

CTRL's CBM is a customized turn-key program that integrates ultrasound technology with analysis. Ultrasound data and reporting is available from any PC through the secure web-based application. CTRL works with your organization at each step to ensure success.

### Program Components

- |               |   |
|---------------|---|
| <b>Step 1</b> | <b>Identify Critical Equipment</b><br>Initial locations, equipment, and test points   |
| <b>Step 2</b> | <b>On-Site Training &amp; Integration</b><br>Take initial readings with CTRL Ultrasound Technology<br>Set thresholds<br>Hands-On use to multiple applications |
| <b>Step 3</b> | <b>Implementation</b><br>Capture and trend ultrasound data<br>Compare to history  |
| <b>Step 4</b> | <b>Measurable Results</b><br>Reduce unexpected production downtime<br>Extend equipment life<br>Email notification of call to action                           |

### Analysis

#### Real-Time Analysis:

Identifies characteristics within the real-time wavefile that are anomalous to what a good bearing should sound like

#### RMS Amplitude Comparison (with respect to set threshold):

Automatically flagged and notified by email if threshold exceeded

#### Bearing Health Assessment (with respect to the threshold):

"Normal", "Underlubricated", "Suspect", "Questionable"

### CTRL CBM

- Make Informed Decisions
- Reduce Parts Swapping
- Extend Equipment Life

Reduce catastrophic production loss!

# PROGRAMS & SERVICES

## CTRL ESP (Compressed Air Energy Savings)

Total Solution

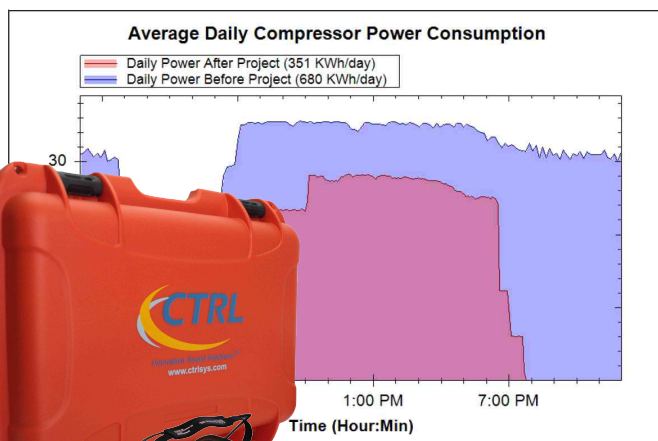

CTRL's ESP is a customized turn-key program that integrates ultrasound technology with real-time power monitoring. Energy usage of the compressors is measured 24/7, along with pressure and costs. The savings generated through leak detection are accurate. There is no guess-work.

### Program Components

- |               |  |
|---------------|--|
| <b>Step 1</b> | <b>On-Site Survey &amp; Training</b>   |
| <b>Step 2</b> | <b>Monitoring - initial measurements of compressors</b><br>24/7 measurements of kWh usage and costs<br>Data delivered wirelessly |
| <b>Step 3</b> | <b>Leak Detection &amp; Repair</b><br>Ultrasound used to locate and tag leaks for repair<br>Leaks repaired and confirmed         |
| <b>Step 4</b> | <b>Monitoring - post repair measurements of compressors</b><br>Comparison of measurements<br>Accurate, quantified results        |
| <b>Step 5</b> | <b>Sustained Savings</b><br>Thresholds set to notify when leak detection required  |

Compressed air accounts for 10%-30% of the electric bill in a typical manufacturing facility, but only half is used for operations.

U.S. Department of Energy

### CTRL ESP

- Know Your Cost
- Correct Your Loss
- Sustain Your Savings

Reduce energy usage by 20% or more!

# DETECTORS

Ultrasound Kits & Components

# UL101 Detector

Part Number	Description
000031	UL101 Full Kit, Standard
000033	UL101 Full Kit, Intrinsically Safe*
000036	UL101 Air Audit Kit, Standard
000038	UL101 Air Audit Kit, Intrinsically Safe*
<b>Kit Components</b>	

UL101 Receiver  
UT2000 Transmitter (Full Kit Only)  
Industrial Grade Headset: Over or Behind-The-Head Style  
Concentrator Set: Large, Mini, & Acoustic Tip  
Acoustic Extension Probe Set: 4 Extension Probes & Adaptor  
3-inch Solid Probe  
Solid Probe Set: 5, 8, and 13-inch (Full Kit Only)  
Training CD  
Operator's Manual  
Carrying Case

**Shipping Weight: 9 lbs./Dimensions: 16" x 15" x 7"**

\*ANSI/UL 913-88, for DIVISION 1, CLASS I, Groups A, B, C and D, CLASS II, Groups E, F, G and CLASS III. It also complies with DIVISION 2, CLASS I, Groups A, B, C and D, CLASS II, Groups F, G, and CLASS III

# LONG RANGE

UI101 Attachment

# PowerBeam 300

Part Number	Description
007005	PowerBeam 300
000041	UL101 Corona Detection Kit, Standard

## Corona Kit Components

- UL101 Receiver
- Industrial Grade Headset: Over or Behind-The-Head Style
- PowerBeam 300
- Training CD
- Operator's Manual
- Carrying Case

**Shipping Weight:** 15 lbs./Dimensions: 21" x 18" x 7"

### Extends range of detection of UL101 Receiver to 300 Feet!

The PowerBeam 300 accurately pinpoints source of ultrasound to within 1 degree from center and improves the sensitivity of the UL101. The "PB300" was originally designed for the indication and location of corona discharge and arcing on medium/high voltage transformers. The PB300's ability to pinpoint ultrasound is very useful when finding compressed air/gas or steam leaks in pipes located on high ceilings. There is no need to get a ladder or scissor lift.

# PRODUCT SUPPORT

## Options

# Training

CTRL's provides several options for training and support to maximize the benefits and ROI of ultrasound technology. The turn-key programs include on-site training as part of the program. Training includes use & operation of CTRL products, hands-on experience, tips & techniques, and more. Support does not stop there. CTRL's "womb-to-tomb" support approach helps organizations throughout their lifetime.

Part Number	Description
090010	Training At CTRL Headquarters
090020	1/2 Day On-Site Quick Start Training
090030	1 1/2 Days On-Site Training
	Condition Based Monitoring Setup & Training
	Energy Savings Program Setup & Training
	Total Solution - Combined Training

Call the customer service manager at any time for additional support or for customized training options.

# RESULTS

## Customers With Benefits

### Industrial - Energy Savings Programs

Distribution Centers such as Target, Amazon, Federated Logistics (Macy's), and others use the UL101 at each facility to maintain their conveyor system and reduce compressor energy usage. In some facilities, the UL101 has helped reduce energy usage by as much as 60%.

Compressed air accounts for 10%-30% of a typical manufacturing facilities electric bill. Companies like Graham Packaging, International Paper, and McCormick use a lot of compressed air for production. Maintaining system pressures and reducing leaks is a standard practice at each facility.

### Military

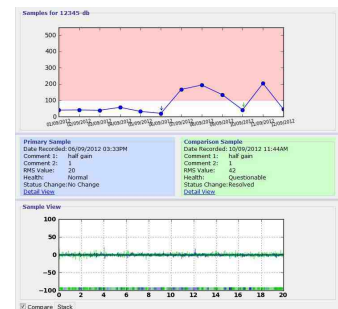

CTRL products are integrated to numerous applications throughout the military. The Navy identified over 100 different maintenance applications where the UL101 could be used on board ship. The Air Force and Army integrated the UL101 for improved fleet readiness. Overall, using the UL101 helps reduce significant man-hours and costs, with an estimated ROI of 15:1.

### Industry - Condition Based Monitoring

How much is one hour of production worth to you? CTRL's ultrasound solution for CBM (condition based monitoring) allows maintainers to quickly test and receive real-time feedback from bearings, gears, motors, pumps, and valves. Testing takes seconds and results are instantaneous.

Companies like International Paper and Schlumberger Oilfield Services reduce unexpected downtime significantly with the CTRL CBM program. As one paper plant put it, "we haven't had an unexpected bearing failure on the monitored equipment in eight years."

# CTRL Systems, Inc.

CTRL Systems, Inc. is a designer and manufacturer of ultrasound detection systems for maintenance. Manufacturers face many challenges, such as extending the life and improving the performance of equipment. It is sometimes necessary to do these things with limited resources – less personnel, less time, and more demands.

A good predictive maintenance, energy savings, and quality control program can prevent unexpected failures, downtime, and waste. CTRL's ultrasonic technology provides an efficient and cost effective method for monitoring critical equipment and leak detection. Frequent inspection, documentation, and trending are crucial for an effective program.

CTRL can work closely with your organization to provide a seamless integration of ultrasound technology into current processes for the maximum level of ROI and satisfaction.
