

CTC AppNotes

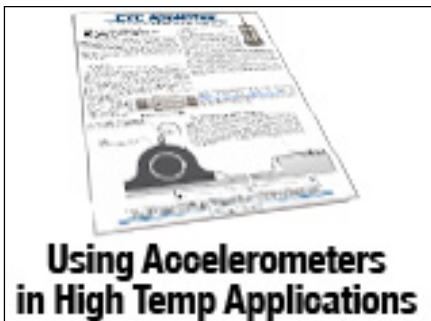

A series of technical documents written by members of the CTC community

CTC AppNotes - Share your experience

This month we are asking for the CTC community to get involved in our app notes project. If you or a friend has a technical tip, a

brief write up of CTC products in action, or an application note that might be of interest to the CTC vibration analysis hardware community or the protection, reliability and optimization controls community, CTC is interested in the possibility of featuring your contribution in one of our AppNotes on the CTC website.

Past topics have included accelerometer mounting, wind turbine monitoring,

Proximity probe tips and many other topics.

No topic is too unusual to submit, but we cannot guarantee that all topics will be selected for publication on the website. Please submit any topics for consideration to sales@ctconline.com. If

your submission is selected you will receive a personalized CTC M H 1 1 4 - 3 A magnet engraved with

your name and company.

If you have any questions or for further information please contact CTC directly via email at dgripe@ctconline.com or jsmith@ctconline.com or feel free to call 1-800-999-5290 in the US and Canada or +1-585-924-5900 internationally

If any CTC vibration analysis hardware product should ever fail, we will repair or replace it at no charge.
