## TRAINING COURSES FROM AZIMA DLI

### ExpertALERT™ 101

This hands-on course conducted at your facility is designed to teach you the basics of how to set up your condition monitoring system. You'll learn the fundamentals of data collection, machine blocking, sensor orientation, and database set up. After completing this course you'll be able to review the vibration spectral data, recognize common machinery faults, and understand how to generate and distribute reports. This course is also taught at various off-site locations throughout the U.S.

### ExpertALERT 102

This onsite course is conducted at your facility after completing your initial setup training (ExpertALERT 101). This course focuses on the development of the Automated Diagnostic System such as selecting average baseline data, renormalizing data, and fine-tuning the Expert rulebase. After completing this course you'll be able to recognize the most common machinery faults and understand how to edit and distribute reports.

### ExpertALERT 201

This advanced offsite course is focused on the maturing of the Expert Automated Diagnostic System (EADS). Topics covered include creating average baseline data, automated order normalization, component and fault code selection, and ExpertALERT rulebase logic. Students will get an overview of the Azima DLI methodology and will learn how to successfully set up a program.

### ExpertALERT eLearning

This web-based training course fully covers the use of Azima DLI's ExpertALERT machinery condition assessment software. The entire eLearning course is approximately 40 hours and is designed to allow you to learn at your own speed but in an interactive environment. This comprehensive web-based course starts with the basics of setting up a vibration analysis program using the ExpertALERT software and ends with step-by-step instruction on how to fine-tune your database to achieve the most accurate diagnostic results.

### Quickstart Mentorship Program

Azima DLI's WATCHMAN™ Quickstart mentorship program is designed to help get your condition monitoring program up and running over a six month time period. With our expert guidance we will oversee the implementation of your program in three specific phases. After completing Quickstart your staff will have the skills needed to manage a successful CBM program.
